Subject: Libby OU3 tree bark/soil results

Hi all

The asbestos results for the tree bark samples and forest soil samples collected within OU3 of the Libby site were published in the document "Phase II Sampling and Analysis Plan for Operable Unit 3, Libby Asbestos Superfund Site, Part C: Ecological Data" dated September 17, 2008. The document is in the OU3 administrative record - SDMS document number 1085869.

The attached file contains all tables in the document - Please see tables 3-13 and 3-15 for the tree bark and soil results.

The figure displaying the locations of the samples and the results was too big to email but is included in the document as well.

- IIC%20Tables.pdf

The asbestos results for the duff samples have not been published yet - we don't have 100% of the results and they are undergoing validation.

Sincerely,

Bonnie
